SIR:

I herewith submit the report of The Mines Branch for the year ending December 31, 1941.

Respectfully submitted,

A. A. MILLAR,
Chief Inspector of Mines.

ANNUAL REPORT OF THE MINES BRANCH FOR THE YEAR
ENDING DECEMBER 31st, 1941

(ANDREW A. MILLAR, *Chief Inspector*)

The output of coal produced from mines in the Province during the year 1941 was 6,970,064 tons, with a valuation of \$19,337,420.00, this being an increase of 764,976 tons over the output produced for 1940, and is the third highest tonnage produced in the history of the Province.

In addition to the above tonnage, there were 227 tons produced by farmers under permit for their own use, which has not been included in the total output.

The disposition of coal during the year was as follows: 1,335,606 tons sold for consumption in Alberta; 2,023,110 tons sold for consumption in other Provinces of Canada; 32,742 tons to the United States; 3,090,290 tons sold to railroad companies; 117,986 tons were used in making briquettes; 105,390 tons used in making coke; 137,739 tons used under colliery boilers; 7,523 tons used by colliery railroads; 54,436 tons were put to stock, and 10,973 tons were put to waste.

The railways took 369,497 tons more than in 1940. There was also an increase in shipments to Ontario.

During the year 5 shale pits produced 44,109 tons of shale and clay from which 13,593,050 bricks and 8,080 tons of hollow tile were made.

There were 239 mines producing coal during the year, of which 8 opened, 1 re-opened and 26 abandoned. In addition to the mines abandoned, 24 were closed, leaving 207 mines in operation as at December 31st, 1941.

The number of men employed during the month of December was 9,229, being 159 more than for the corresponding month in 1940.

On March 10th, Mr. Wm. Goodwin was appointed as District Inspector of Mines with headquarters at Edson, succeeding Mr. Thomas Horne, who was superannuated.

I regret to report that the number of fatal accidents for the year was 48, as compared with 13 in 1940.

Included in the list of fatalities was one that happened to William Bevington, who was engaged prospecting about 1½ miles from the mine at Luscar. He was working alone when a cave occurred, suffocating Bevington. Under the conditions, Bevington should not have been working alone.

On June 12th in Room 27 off No. 7 Level, North of Greenhill Mine, Blairmore, a considerable quantity of coal ran away from the face without warning and caught two men working in same, with fatal results. Large volumes of inflammable gas accompanied the ejection of the coal, and difficulty was experienced in clearing out the gas and recovering the men.

This occurrence was repeated in Room 28 two weeks later, but fortunately no person was injured.

As a result the area in question was stopped until I could examine the same, which I did later.

The inclination of this seam was found to have increased to about 45 degrees, and when under gas pressure the coal was liable to run and get out of control, liberating gas in quantity.

After giving consideration to the conditions, the management was asked, and agreed, to reduce the size of the places and drive them on an angle instead of straight up the pitch, place the timbers closer and to keep the face lagged up so as to keep the coal under control.

Close supervision has also been exercised, and I am pleased to report no further trouble has been experienced.

On June 24th at the Western Crown Mine, East Coulee, an explosion of gas occurred in which three officials were killed, while a fourth person, the Manager of the Regal Mine, who was engaged in trying to rescue the other men, was overcome by Carbon Monoxide, and was dead when brought out by the rescue men.

This was a new mine, only in a short distance from the surface and had only light surface cover. All the mines in the district, some of which are working on a large scale, are working with open lights and open light conditions.

The mine was being opened up on the two entry system, and the point of the explosion was a dead end off a crosscut from the main to the back entry, at which point the seam was in a troubled condition due to local faults, bone and clay intrusions, which was a likely reservoir for small pockets of firedamp.

It is believed that shot firing, coupled with the men being allowed to smoke, was the cause of the explosion. Two shots were to be fired in the place, and it is thought that the first shot liberated a small pocket of gas, which was ignited by the men during the process of preparing the second shot to be fired, while smoking either a pipe or cigarette.

This mine was operating as an open light one, and no restrictions were placed on men smoking, and although electric lamps were in use, these had been installed solely for the sake of efficiency and cleanliness.

A safety lamp inspection of this place had been made that morning and no indication of gas was found, and reasonable precautions were being taken. This mine was placed on a strictly safety lamp basis following the explosion.

Orders were also given other mines in the vicinity to carry out safety lamp inspections and gas detector observations, so as to safeguard against a similar occurrence in these open light mines.

The accident shows that the utmost vigilance is necessary at all times for safety, and a mine, even if no gas has been found in it previously or over a long period of time, cannot be regarded as one in which gas may not be found at any moment.

On October 31st an accident occurred at the Brazeau Collieries Mine, Nordegg, through an explosion.

In this accident 29 persons were killed. This accident was evidently caused by an explosion of gas, the full cause of which at present is unknown.

For the purpose of enquiring into the cause, the Government appointed Mr. Justice A. F. Ewing of the Alberta Supreme Court

as Commissioner to conduct an enquiry, but the report of the Commission is not available.

Very little labour trouble occurred during the year.

There has been a shortage of labour reported in some districts during the year, and if it had not been an exceedingly mild winter some difficulty would have been experienced by the domestic mines in filling orders. Machinemen, tracklayers, mine electricians and some classes of labour are not obtainable, and further recruitment is going to make it difficult for the mines to carry on.

With the increased need for coal due to the war and the increasing difficulty likely to arise in getting help at the mines, it would appear necessary that some effort be made to have the mines, particularly the domestic ones, operate over a longer period than has been the case within recent years.

More coal should be put into stock by the dealers earlier in the season such as used to be the practice some years ago, and the buying public should be pressed to put in their coal supply as soon as possible. This should be impressed on the Ontario dealers, for I am of the opinion if they are going to get any large tonnage of Alberta coal in 1942, they will have to place their orders early.

It cannot be expected that mines will work three and four days per week for one month and work time and a half the next as well as Sundays, simply because the dealers and consumers have failed to put in supplies when same were available.

Considerable difficulty is now being experienced by the mines in getting different kinds of materials and equipment. This applies particularly to electrical equipment and electric motors, as these motors have to be specially constructed to render them safe to use in mines. Any substitution of motors or equipment not fully flame-proofed is going to reduce the safety factor in our mines. Some consideration of these matters should be given by the authorities.

At the present time it does not seem possible to purchase and obtain delivery on some kinds of gas detectors unless a priority rating is obtained.

Samples of mine air were taken at various mines during the year by the Inspectors and sent to the Chemistry Branch of The Department of Mines, Ottawa, for analysis; this having been done in addition to testing the air with the Burrell, McLuckie and M.S.A. Detectors.

Samples of coal were collected and forwarded to the Industrial Research Council, University of Alberta, for analysis.

All fatal and serious accidents have been investigated by the Inspectors, who also attended the inquests held in their districts, this being in addition to the regular inspection of the mines. All complaints made to the Department were also investigated.

There were 22 prosecutions instituted for contraventions of The Mines Act, made up as follows: 3 operators, 1 manager, 1 overman, 2 examiners, 11 miners, 1 trapper, 1 agent, 2 timber packers.

There were 35,973,384 K.W. hours of purchased electrical power used by the mines in the Province during the year.

The distribution of purchased power by the mines in the various areas was as follows:

Big Valley, 9,120 K.W. hours purchased from the Union Power Co., Ltd., Drumheller, who also supplied 142,070 K.W. hours to mines in Carbon and 4,891,464 K.W. hours to mines in the Drumheller area.

The Calgary Power Co., Ltd., supplied electrical power to mines in areas as follows: Camrose 17,067 K.W. hours, Cascade 2,282,060 K.W. hours, Edmonton 522,760 K.W. hours, Gleichen 2,250 K.W. hours, Lethbridge 2,198,030 K.W. hours, Taber 11,000 K.W. hours, Nordegg 2,376,000 K.W. hours, Saunders 112,800 K.W. hours.

The City of Medicine Hat supplied mines in the Redcliff area with 54,000 K.W. hours.

The City of Edmonton supplied 717,800 K.W. hours to the Edmonton mines.

The mines in the Crowsnest area purchased 22,581,758 K.W. hours from the East Kootenay Power Co., Ltd.

Two mines in the Coalspur area exchanged 55,025 K.W. hours.

The protective equipment in use is as follows: 2,393 hard hats, 677 pairs of safety shoes, 142 pairs of goggles and 376 pairs of knee caps, which is a considerable increase in the first three mentioned items, compared with the year 1940.

During the year, 565 miners were granted certificates, 148 of which are Class "A"; a total of 16,499 miners' certificates have been issued since the passing of the Act requiring same.

The Regal Coal Co., Ltd., installed 4 Goodman Duck-Bill loaders, each 20 H.P.; 4 Goodman short wall under cutters, each 35 H.P.

The Monarch Coal Mining Co., Ltd., East Coulee, installed a motor generator set and trolley locomotive, 1-30 H.P. coal cutter, and a small 5 H.P. spotting hoist.

Murray Collieries, Ltd., installed a 75 H.P. motor generator set and one trolley locomotive, also one C.E. 7 Sullivan Coal Cutter.

Empire Collieries, Ltd., East Coulee, installed a 10 H.P. single drum hoist.

Western Gem & Jewel Collieries, Ltd., installed 2 additional transformer banks underground.

Rosedale Collieries installed a 15 H.P. Booster fan underground.

Red Deer Valley Coal Co., Ltd., installed a main and tail rope haulage driven by 60 H.P. electric motor, one Goodman Duck-Bill unit with 20 H.P. electric motor, one Goodman short wall coal cutter, 35 H.P.

Monarch Coal Mining Co., Ltd., installed another Goodman Duck-Bill loader with 20 H.P. electric motor and one small 3 H.P. spotting hoist.

Hillcrest Mohawk Collieries, Ltd., installed 1 electric 37½ H.P. hoist, 1 electric 7½ H.P. fan, 1-10 H.P. air compressor, 1 conveyor with 20 H.P. electric motor, 1 box car loader and 1 box car puller, each 20 H.P.

West Canadian Collieries, Ltd. (Bellevue Mine), installed a 35 H.P. electric hoist underground, also 3 Duck-Bill loaders operated by compressed air.

The Lethbridge Collieries, Ltd., Lethbridge, installed a new cleaning plant with motors totalling 100 H.P.; 2 shaker conveyors each driven by 20 H.P. motors, and 1 Meco Duck-Bill loader operated by a 25 H.P. motor.

The Kerralta Coal Co. installed a 30 H.P. electric Sullivan coal cutter.

Canmore Mines, Ltd., installed a hoist at new slope, operated by a 2,300 volt 100 H.P. motor.

Brazeau Collieries, Ltd., installed a new briquette plant; 1-50 H.P. electric hoist underground, also 2 electric pumps, one 15 H.P. and the other 3 H.P. They are now mining coal with compressed air picks.

Mountain Park Coals, Ltd., installed a creeper at top of slope with a 10 H.P. motor, also a new dryer with several motors. They have completed a new rock slope and cross measure tunnel to No. 3 seam and installed a fan to ventilate the workings of same.

Luscar Coals, Ltd., installed a 150 H.P. electric hoist underground. Two new openings have been made on the Cadomin limb of the seam, and fans have been installed to ventilate same. The coal is trucked a distance of approximately two miles to the loading bins near the main slope.

The Lakeside Coals, Ltd., at Robb installed a main and tail rope haulage underground with a 20 H.P. motor.

Foothills Collieries, Ltd., installed a 75 H.P. electric pump and a 7½ H.P. electrically operated tugger hoist underground.

The West Canadian Collieries, Ltd. (Greenhill Mine) installed a compressed air operated Duck-Bill loader. Fans have been installed at three new openings from which the coal is hauled by trucks to the main tippie; several coal bins have been built to handle the coal from the new openings. An endless rope haulage electrically driven has been installed to haul the coal from the No. 4 seam. They have also added an air compressor unit of 900 cu. ft. per min. capacity and a plant for charging Cardox shells, capacity 75 to 100 shells per day.

The Canadian Collieries (Dunsmuir), Ltd., took over the mine operated by the McLeod River Hard Coal Co., Ltd., near Mercoal, and are now operating under the name of McLeod River Hard Coal Co. (1941), Ltd.

Thirty-two Collieries, Ltd., now operate the No. 1157 Mine, previously known as the Bryan mine.

The International Coal & Coke Co., Ltd., have driven their main rock tunnel 2,316 feet during the year.

ANNUAL PRODUCTION OF COAL FROM MINES IN THE PROVINCE OF ALBERTA

*The sum of Canadian coal-mine sales, colliery consumption, coal supplied to employees, and coal used in making coke, etc., less the tonnage of coal exported.

†Includes small tonnages from countries other than Great Britain and the United States. Deductions have been made to take account of foreign coal re-exported from Canada and bituminous coal ex-warehoused for ships' stores.

THE MINES BRANCH

The following table shows the quantity of coke imported into Canada during the years 1939, 1940 and 1941, through ports in the Provinces, compiled from information from the Dominion Bureau of Statistics:

PARTICULARS OF WORK DONE IN SHALE MINES IN THE PROVINCE DURING 1941

Output of shale (in tons) used making bricks	34,829
Number of shifts worked	12,565
Average number of men employed	57
Explosives used (pounds), 40% Dynamite	5,550
Explosives used (pounds), Monobel	150
Number of shots fired, using fuse	2,336
Total number of bricks made	13,593,050
Total number of bricks put to stock	3,168,393
Total number of bricks lifted from stock	2,423,764
Bricks sold for use in: Alberta	6,446,615
British Columbia	1,062,980
Saskatchewan	3,842,845
Manitoba	1,201,800
Ontario	110,650
Total	12,664,890

Hollow tile made (tons)	8,080
Hollow tile put to stock (tons)	4,756
Hollow tile sold	6,517
Hollow tile lifted from stock	710

PARTICULARS OF WORK DONE BY FARMERS STRIPPING COAL UNDER DOMESTIC PERMIT

Tonnage	227
Number of days worked during the year	26
Number of men employed during the year	23
Total number of shifts worked	120
Total number of permits issued	15
Total number of permits used	9

The above coal was stripped for domestic use only and not for sale.

NOTE.—The table showing the number of men employed in the Anthracite Coal Field, includes employees at the briquetting plant. There has been no anthracite coal produced since 1923.

*Calculating the total per capita production for men employing underground, the tonnage mined from stripping pits was deducted and only the tonnage produced from mines was used.

It will also be noted that the tonnage used in the above and following tables does not include tonnage extracted under permit.

THE MINES BRANCH

ELECTRICITY

The rules for the installation and use of electricity in or about mines requires a return to be made to the Department on or before January 15th of each year, giving size, type and any other particulars which may be required of electrical apparatus in use above and below ground. According to the return received from the different mines, electricity was used in 71 different mines in 1941. A summary of these returns regarding the horse-power of electrical apparatus in use is given below.
